mPATHX LLC Background

mPATHX is the name of the company and its patent pending technology. After nearly five years of research and development, the company is introducing its groundbreaking technology and market-making products. mPATHX continues to innovate technology and products designed to revolutionize the way the world uses power and transmits data. mPATHX technology enables electronic and electrical devices to receive power and exchange data over a single physical connection. Initial implementations of mPATHX products and technologies will help remove billions of unwanted and now obsolete AC/DC transformers, commonly referred to as wall-warts, greatly reducing electrical noise, heat, waste and cost. mPATHX technology, when licensed by original equipment manufacturers will eliminate the need for the variety of different cables used to power, connect and exchange data between different pieces of electronic and electrical gear.

mPATHX will introduce its first brand-name product through a network of independent sales representatives and qualified pro-audio, sound reinforcement, music instrument retailers and large independent users. The company will also license mPATHX technology to original equipment manufacturers that want to provide enhanced features, functionality and value for worldwide users of their consumer, commercial and industrial electronic and electrical devices. Central to the company's culture is its vision, mission, credo and goals:

- Vision:** Create.
- Mission:** Develop interdependent relationships of reciprocal value.
Develop collegial teams of professional individuals with complementary strengths.
Achieve perfection.
- Credo:** Speak truthfully.
Be the most partnerable company in the world.
- Goals:** Provide a single physical connection for electronic & electrical devices to receive power & exchange data.
Eliminate inefficient external AC/DC transformers & wall-warts worldwide.
Remove wall-wart heat, noise, waste & cost worldwide.
Replace the myriad of data & other cables worldwide.
License mPATHX technology to original equipment manufactures of consumer, commercial & industrial electronic/electrical devices worldwide.
- Products:** SmartRack – 19" 1RU computer controlled AC/DC power distribution unit.
Intuitive graphical user interface enables users to control & monitor their power & more.
Complete line of DC cables & adaptors designed to replace wall-warts in recording studios, sound reinforcement systems, musicians' rigs & IT server cabinets.
