WALL-WARTS ARE DEAD - WE KILLED THEM

mPATHX has *solved* the problems created by AC/DC transformers, commonly called wall-warts. Warts burden recording studios, sound reinforcement equipment, musicians' rigs, IT server cabinets and worldwide users of today's latest consumer electronic devices.

The company's first product, SmartRack, is a 19" rack-mount intelligent power distribution unit with eight DC outlets and six AC outlets. Using patent-pending mPATHX technology, the SmartRack eliminates the need for wall-warts and their noise, heat, and waste while creating a cool savings of \$20-\$50 per wart per year!

In 2004, more than 58 billion kilowatt-hours of electricity were wasted in the United States alone by inefficient wall-warts. SmartRack with mPATHX technology gets rid of the warts and their waste removing them from your system. SmartRack is the smart choice for use in hobbyist and professional recording studios, sound reinforcement systems, musicians' rigs, and IT server systems.

In a Fall 2005 *Wall Street Journal* article, Staff Reporter Lee Gomes stated: "*My dream product... would let me get rid of all those strips and small transformers. It would be... a supertransformer that would output DC power at different levels depending on the product.*" mPATHX's innovative SmartRack is that dream product, and more.

A USB cable connects the SmartRack to a computer while its graphical user interface enables users to control, program, monitor, and deliver the different voltages required by various pro-audio and other electronic devices in and outside the rack. SmartRack is fully programmable and includes upgradeable software, firmware and field repairable surge and noise components.

OEMs can choose to license mPATHX technology for their own products to benefiting both themselves and their customers with cutting edge features, functionality and benefits.

The company was co-founded by Gregory W. Menas, CEO and Brent A. Miller, Product Development Director in 2001. mPATHX offers an innovative, efficient solution to wall-wart waste and expense-SmartRack puts you on the smart track to clean, cool, noise-free power!
